

**LAMICOLOR®**

**LAMCOSAFE**

**HELPING TO CONTROL GERMS AND BACTERIA**

ANTIMICROBIAL PROTECTION FOR MATERIALS

LAMCOSAFE is a new product from LAMICOLOR® that, using BioCote® silver ion technology can protect laminate against the action of germs and bacteria. A protection that uses the natural properties of silver.

**LAMCOSAFE. Safer. Cleaner. More Hygienic.**

The Effective Action of Silver

Effective antimicrobial treatment using the natural properties of silver.

Our products are treated during production and the silver ions are distributed throughout the material to provide lasting surface protection against bacteria.

The treatment remains effective against bacteria, without wearing off or dissolving in water or other substances.

The technology does not affect the normal performance of the product or its appearance in anyway other than imparting antibacterial properties.

Antibacterial Protection is what gives an added value to our product.

Today's market is more demanding than ever. Safety, hygiene and protection levels need to be increased in all areas:

Hospitals / Sales points / Leisure / Food / Homes / Schools / Laboratories
